The Oriental Institute Integrated Database Project

http://oi.uchicago.edu/research/oriental-institute-integrated-database-project-idb

The Oriental Institute's Integrated Database Project aims to provide public access to information about the diverse research and object-based collections managed and cared for by the Oriental Institute via an online collections search. The project began in 2005 and has involved migrating data from the older databases to our new KE EMu (Electronic Museum) database. Please visit the pages below for more information.

Search Our Collections

http://oi-idb.uchicago.edu/

The public face of the Integrated Database is the Search Our Collections page available through the Oriental Institute website. Over 1,000,000 items are available to researchers for searching, sorting, storing, and downloading from the collections of the Research Archives, Museum Archives, Museum Registration, and Photographic Archives.
